baabor

BORN
TOUGH

chisel

for extreme conditions

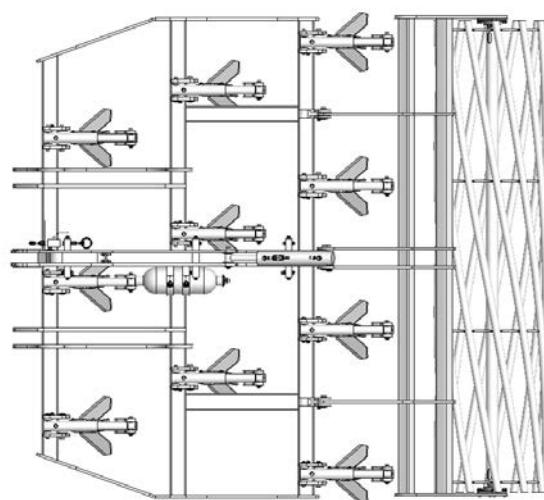

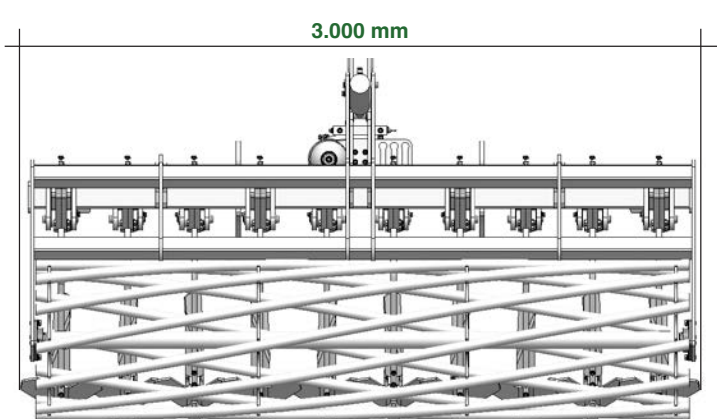

The **baabor chisel** is a compact, robust and reliable cultivator guaranteed to be a long-lasting machine. It is perfectly suited both for shallow stubble treatment on all types of surfaces and for intensive soil mixing and movement, working at depths between 5 and 40 cm. Thanks to its sturdy, **three-row frame** and **high ground clearance (80 cm)** construction, the crop residues can be mixed without clogging even in the toughest conditions.

It is equipped with hydro-pneumatic overload protection units that allow for easy pressure adjustment depending on soil type and compaction. In addition, it features 80 cm long tines and a 30 cm release travel mechanism in case of obstacles.

A variety of tine options are available: standard, winged, wear-resistant, and for shallow-working duty.

The **packer roller** has a 700 mm diameter in a helical shape, and other types of rollers can likewise be fitted for optimal soil results.

TECHNICAL SPECIFICATIONS		C300
Working width	mm	3.000
Transport width	mm	3.000
Working depth	mm	150 - 400
Number of shanks		10
Required power	H.P.	180 - 300
Type of coupling	CAT.	III - IV
Approximated weight	Kg	2.300
